Stephanie:

I am sorry I meant that we will not have the revised HV QAPP back to you before the week of Aug 20. Assuming EPA review and CPG response - I don't believe that first HV event will occur until after Labor Day.

Regarding the CWCM - we are proposing to do the Low Flow/Spring Tide event on Wed 8/29 and Thursday 8/30:

We can discuss this next week if you want,

R/  
Rob

Hi Rob,

You indicated that you may be submitting the revised high volume CWCM QAPP next week, and, if I understood your email correctly, that you still think it's possible to be in the field the week of August 20th. If so, we need to set up a logistics/planning call sometime next week.

In addition, do you think we should set up a call to discuss the modifications to the SOP? We are wondering how you are planning to address issues related to the incompleteness of the procedures. Perhaps a call with the laboratories would help?

Overall, please provide more detail on how you see this moving forward on such an expedited schedule, keeping in mind that EPA will need some time to review your response to comments.

As for the next low-flow sampling event, you indicated that you are targeting the end of August because the window around the 16th would fall on a weekend. However, the end of the month falls not only on a weekend, but on a holiday weekend. Holding time concerns would be worse then. If flows cooperate, we recommend trying to complete this event at the end of next week.

Thanks,  
Stephanie
